The 2022 World Cooperative Monitor

Welcome to the 11th edition of the World Cooperative Monitor! As we move into this second decade of the project, produced by the International Cooperative Alliance (ICA) with the scientific and technical support of the European Research Institute on Cooperative and Social Enterprises (Euricse), we are ever more convinced of the need to have robust data for the cooperative movement – data that shows not only the economic importance of this business model, but also the particular impact cooperatives and mutuals around the world have on their members and communities.

The World Cooperative Monitor raises awareness of the economic size and sustainability of cooperatives and mutuals around the world and gives cooperatives an opportunity to gain insights into how their sectors are performing on a global scale. Over the years it has also focused on topics demonstrating the importance of cooperation as key in promoting social and economic development. With the collaboration of apex organisations and researchers around the world, we can improve the level of data collection and types of data collected. We encourage the development of new national monitors following the WCM methodology to collect data on social

and economic impact and our team is always available to help in these endeavors.

This year's report contains the annual rankings and sectoral analysis the movement has come to rely on, as well as a focus feature on digitalization and large cooperatives produced in collaboration with the International Cooperative Entrepreneurship Think Tank (ICETT). After the research on the impact of Covid-19 in the last two editions of the report, the team sought to investigate the changes the pandemic prompted in the use of digital tools, in particular as pertains to member engagement and the specificities of the cooperative identity. The results, found in the dedicated chapter, discuss the level of usage of these tools as well as the strengths and weaknesses of moving towards increased digitalization. We would like to thank all those organisations that responded to the survey and participated in the research.

A special thank you as well to our advisory committee and all the federations, organisations and researchers who enrich the research through data checks, contacts with cooperatives, and help understanding individual cases. And last, but not least, a thank you to our partners and supporters!

Bruno Roelants
Director General, ICA

Gianluca Salvatori

Introduction

The World Cooperative Monitor (WCM) is a project designed to collect robust economic, organisational, and social data about cooperatives worldwide. It is the only report of its kind collecting annual quantitative data on the global cooperative movement. The research and collaborations carried out over the last 10 years have provided the cooperative movement with a significant tool to evaluate its own positioning and have highlighted the importance of cooperation in the world to the general public and policy makers.

The World Cooperative Monitor project intends to pursue 3 goals:

1

Provide visibility to the movement by monitoring and demonstrating the impact of large cooperatives, from both an economic and a social perspective

2

Maintain an up-to-date database on large cooperatives containing economic and employee data

3

Respond to the knowledge needs of large cooperatives, providing both ad-hoc quantitative and qualitative research on aspects of their interest

The publication reports on the world's largest cooperatives and mutuals, or groups of cooperatives and mutuals, including rankings of the Top 300 and sectoral analysis. Each year, the World Cooperative Monitor builds upon the research and data collection of the previous years, continually refining and improving the methodology and data collection strategies. The report has explored various themes over the past 11 years, from sector analysis to capital structure to the contribution of cooperatives to sustainable development. This work has resulted in the report being pointed to multiple times at the UN General Assembly by Secretary General António Guterres as an important resource for demonstrating the impact cooperatives have on resolving global challenges.

Besides the economic and employment data of the Top 300 cooperatives and mutuals at the global level, this year's report features a chapter focused on digitalization. This year's report gives special attention to the topic of digitalization and in particular the effects of the Covid-19 pandemic on the use of digital tools. The focus chapter, based on surveys and research on national initiatives, explores, among other related topics, how participation and membership engagement has changed with the increased use of digital tools. This research compliments the past chapters on Covid-19 and the SDGs, aiming to bring attention to the social dimensions of cooperation.

The thematic analyses in the World Cooperative Monitor are carried out in collaboration with the International Cooperative Entrepreneurship Think Tank (ICETT). This collaboration helps integrate cooperative issues of the moment with the WCM to stimulate strategic action through best practice sharing amongst ICETT members, the top 300 cooperatives and mutuals and the wider cooperative movement.

In addition to this collaboration, the team behind the WCM research has works directly with cooperatives, federations and representative bodies to collect the most accurate and consistent data possible. National data collection initiatives help source additional and in-depth data, helping to bring new elements to the research. The collaborations and scientific rigor behind the research have resulted not only in the collection of robust data on the world's largest cooperatives and mutuals, but also in the strengthening of relationships and cooperation among different stakeholders.

2020 Results and Rankings

This section presents the results of the economic analysis of the world's largest cooperative organisations, cooperative groups, and mutuals.

In addition to economic data, employment data and organisation type are also presented for the Top 300 where available.

The WCM provides two different Top 300¹ and sectoral rankings: one based on turnover and the other based on the ratio of turnover over Gross Domestic Product (GDP) per capita². The ratio of turnover over GDP per capita measures the turnover of the Top 300 cooperative and mutual enterprises in terms of the purchasing power of an economy, relating the turnover of the enterprise to the wealth of the country. It allows us to compare the relative size of enterprises in considering different levels of national economic wealth, but does not compute the contribution of each enterprise to the national GDP. Rather, it measures the size of the enterprise in its national context.

The data collected for the 2022 edition of the World Cooperative Monitor is from the fiscal year 2020. The primary sources of data include annual and sustainability reports, existing databases of economic data, data collected by national associations, research institutes, and other organisations, and the use of a questionnaire to collect data directly from enterprises³. Over the last few years we have concentrated efforts on collecting turnover and employment data through the search for annual and sustainability reports for each organisation in the Top 300 ranking of the WCM 2019 rather than relying primarily on external datasets. This strategy helps ensure data is

¹ It should be noted that due to limited data sources, the Top 300 rankings cannot be considered exhaustive. However, it should also be noted that based on the consolidated data collection methods refined over the last eleven years, the rankings in the WCM 2022 represent a very important part of largest cooperatives worldwide (for more detailed information on data collection, please see the Methodology and Data sources chapter).

² GDP per capita data is sourced from the World Bank.

³ The complete list of data sources is in the methodology chapter.

collected using the same methodology and has contributed to the increased coverage of employment data in the rankings. When online research (in the tables the source is labelled “desk research”) is incomplete, other data sources are utilized, though when multiple sources are available, the desk research is utilized. This strategy has led to the building of an archive of financial statements and annual reports from the last few years. The WCM team is also supported by researchers and federations around the world that help source and verify data – we thank everyone involved for these efforts and collaborations.

Data for 2020 comes from:

Top 300 based on turnover

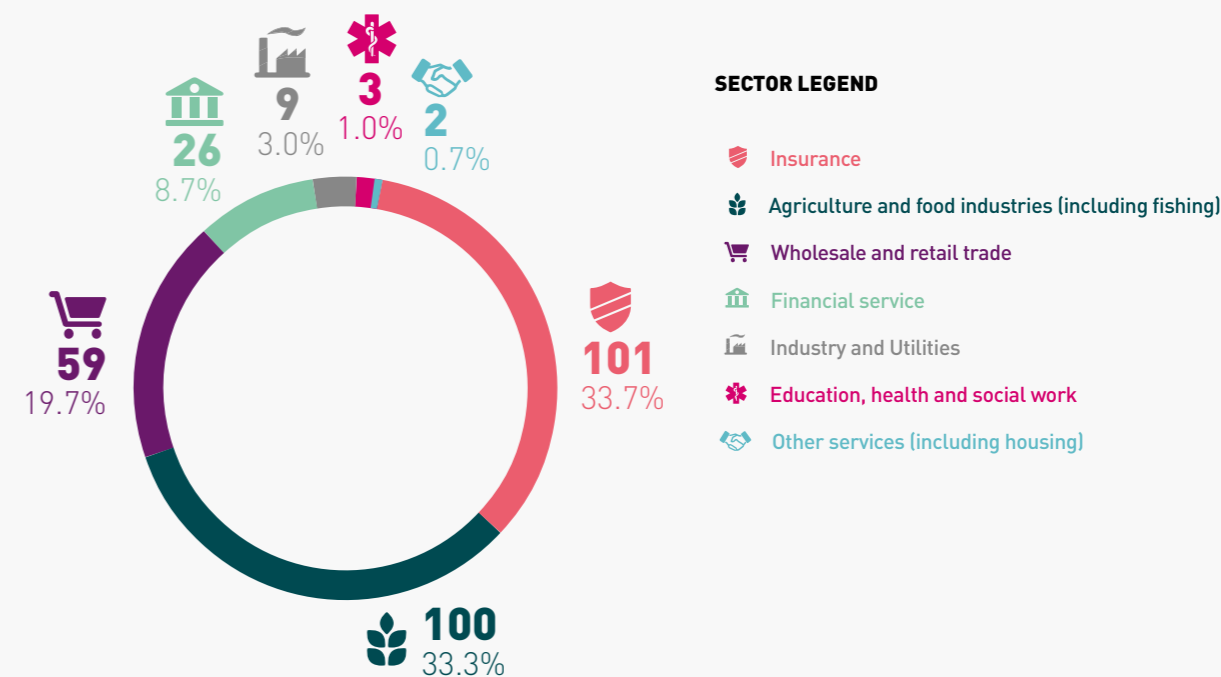

Top 300 turnover/GDP per capita

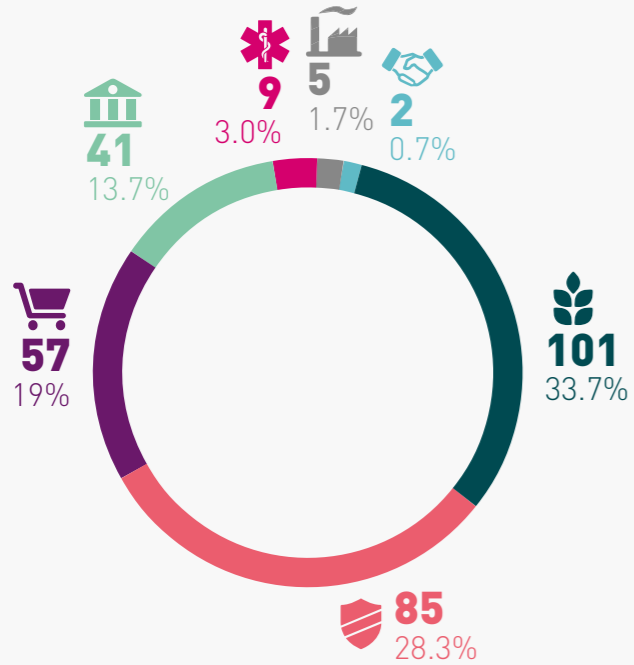

The Top 300 by turnover ranking presents an overall total of 2,170.99 billion USD for the year 2020 with most of the enterprises operating in the insurance sector (101 enterprises) and agricultural sector (100 enterprises), followed by wholesale and retail trade (59 enterprises). The Top 300 by turnover over GDP per capita, rather, sees the agriculture sector standing out with 101 organisations, whereas the insurance sector counts 85 enterprises, followed by wholesale and retail trade (57 enterprises). The financial service sector become more visible in the turnover over GDP per capita ranking with 41 enterprises with compared to 26 enterprises in the Top 300 by turnover. Note that in the Top 300 rankings, the financial services sector turnover is calculated using slightly different indicators than in the financial services sector ranking. For a more detailed description see the methodology.

TOP 300 TURNOVER USD
Economic activities

TOP 300 TURNOVER/GDP PER CAPITA

Economic activities

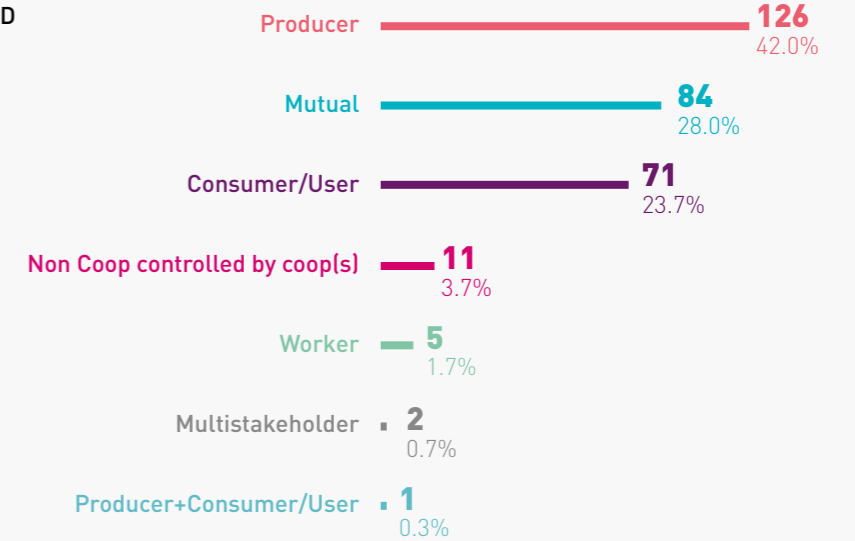

SECTOR LEGEND

- Agriculture and food industries (including fishing)
- Insurance
- Wholesale and retail trade
- Financial service
- Education, health and social work
- Industry and Utilities
- Other services (including housing)

With regards to type, the majority of enterprises in the Top 300 by turnover are producer cooperatives mainly representing agricultural cooperatives and retailers' cooperatives (126, to which is added one producer/consumer), followed by mutuals (84) and consumer/user cooperatives (71). 11 of the top 300 are non-cooperatives controlled by cooperatives, while only 5 are worker cooperatives and 2 are multi-stakeholder cooperatives. The results are similar in the Top 300 based on turnover over GDP per capita, though there are more consumer/user cooperatives than mutuals, respectively 84 and 67 organisations.

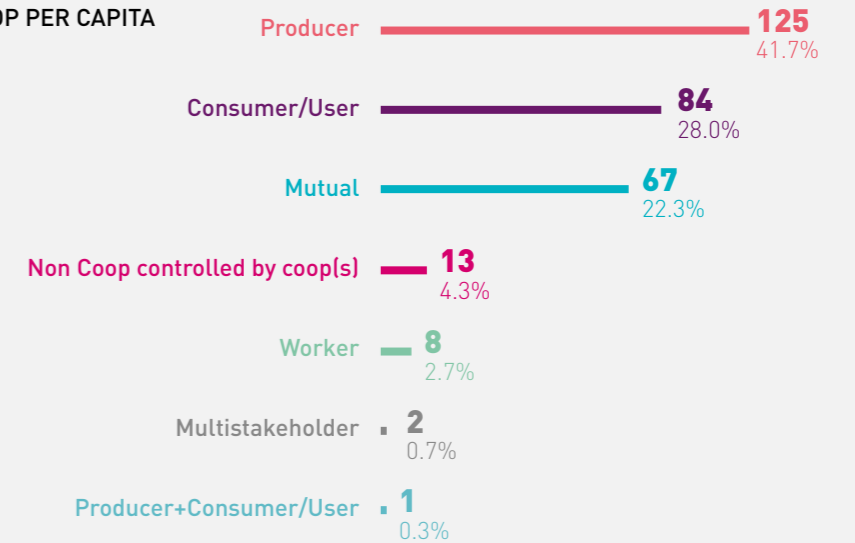

TOP 300 TURNOVER USD

Type

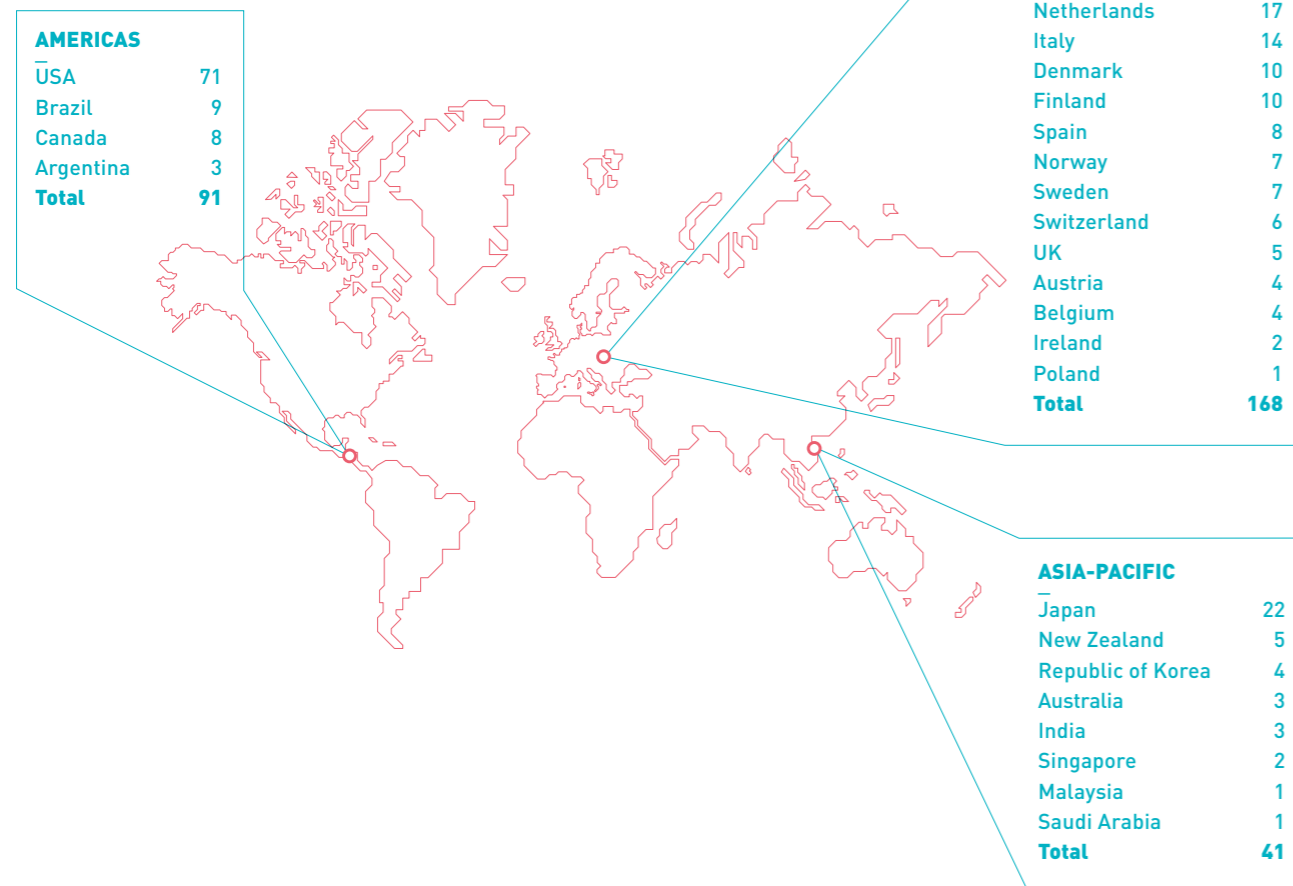

TOP 300 TURNOVER/GDP PER CAPITA

Type

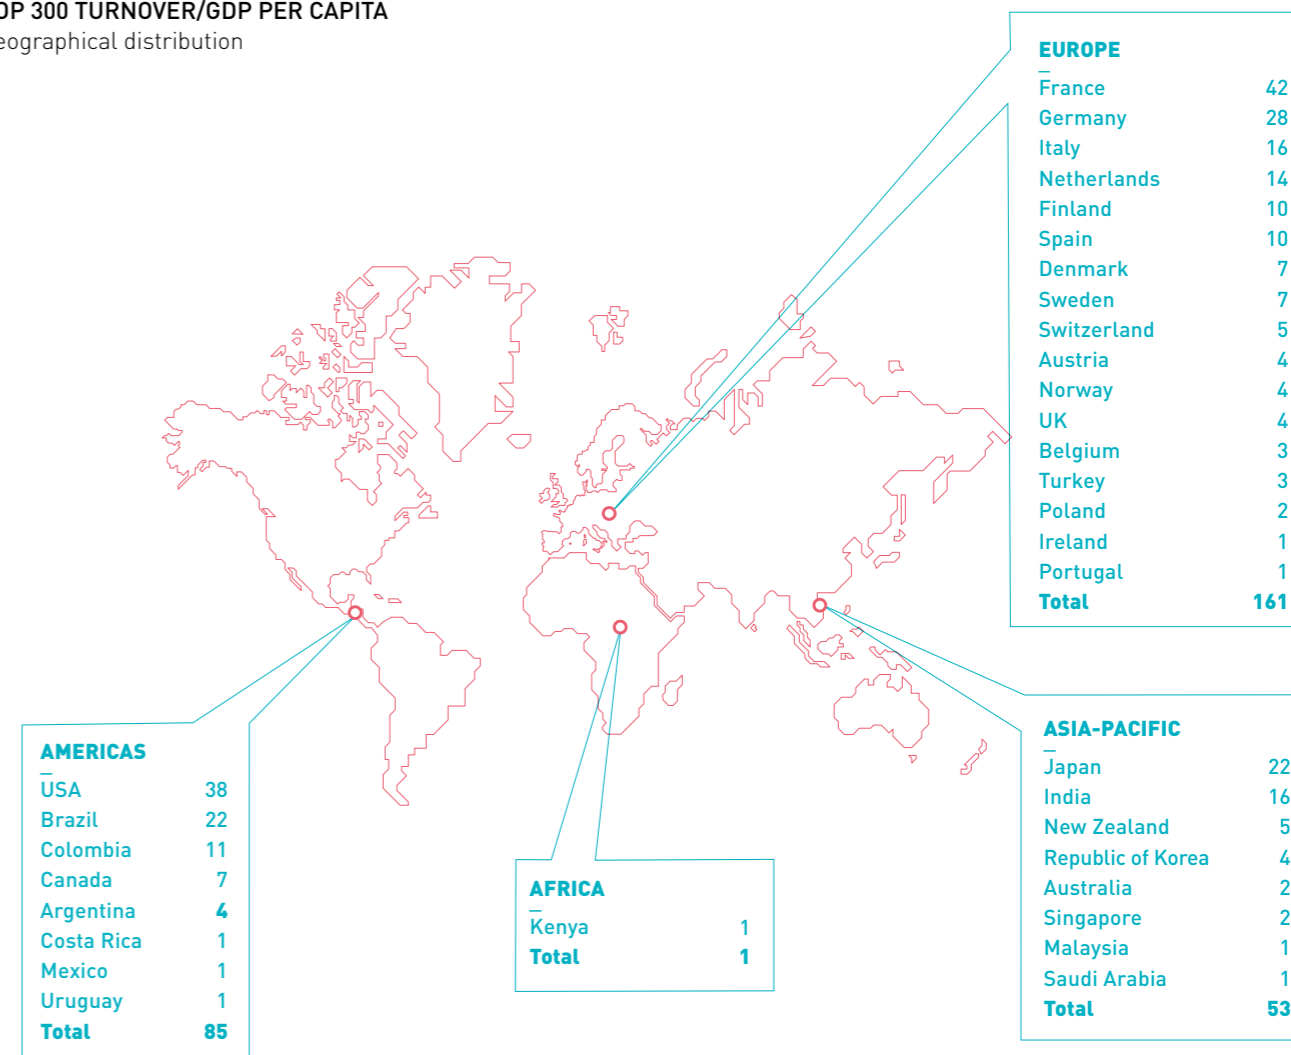

The geographical distribution of the Top 300 by turnover and the Top 300 by turnover over GDP per capita is similar to past years, with most of the large cooperatives and mutuals in the Top 300 rankings located in the most industrialized countries. The Top 300 by turnover over GDP per capita, though, has a larger number of countries, as it is not based on absolute value.

SECTOR RANKINGS

The following pages present the World Cooperative Monitor rankings by sector of activity. The results presented in the rankings are to be considered exploratory, not exhaustive. The methodology found on page 148 provides details concerning the data collection and analysis; however, some key points to keep in mind regarding the rankings include:

- If an organisation performs more than one activity, it is categorized in the sector representing its primary activity. Organisations are classified by economic activity, in some cases multiple economic activities have been combined into a sector.
- Comparisons among cooperatives in different sectors should be made with due caution, keeping in mind that varying economic indicators have been used for different types of organisations (banking income for banks, premium income for insurance cooperatives and mutuals, and turnover for other cooperatives).
- The rankings in this edition are based on data from 2020. To create the Top 300 and sector rankings based on U.S. Dollars (USD) the 2020 average exchange rate was utilized. Note that the conversion to USD from Local currency unit (LCU) is impacted by the fluctuations from year to year.

Agriculture and food industries

This section includes all cooperatives that operate along the entire agricultural value chain, starting from the cultivation of agricultural products and livestock farming to the industrial processing of agricultural products and animals. This sector includes both agricultural producers' cooperatives and consortia of cooperatives (or similar arrangements) that carry out the processing and marketing of agricultural goods for their members. Organisations in the fishing sector are included. Agricultural cooperatives exist in almost every country around the world. They are very well represented in both developed and emerging economies and contribute to food security and poverty reduction in different areas of the world. They help farmers increase their returns and income by pooling their resources to support collective arrangements and economic empowerment.

From this sector, there are **100** in the Top 300 based on turnover and **101** in the Top 300 turnover over GDP per capita

Industry and utilities

This section includes cooperatives operating in industrial sectors with the exception of the food industry as well as those whose economic activity deals with utilities. It includes worker cooperatives in the construction sector and users' cooperatives in the utilities sector, that is, cooperatives that are active in the management of infrastructure for a public service, such as electricity, natural gas, and water. Energy and other public services are sectors in which cooperatives are strongly motivated by ethical-cultural considerations and innovation. Often, they are committed to "green" energy and employ a more sustainable and responsible model of development, while providing local communities with the power to intervene directly in their own futures.

From this sector, there are **9** in the Top 300 based on turnover and **5** in the Top 300 turnover over GDP per capita

Wholesale and retail trade

This section includes retailers' cooperatives formed to purchase and supply goods and services at competitive conditions in the interest of their members (which are classified as producer cooperatives in the cooperative typology) and consumer cooperatives operating in wholesale and retail activities (which are classified as consumer/user cooperatives in the cooperative typology). As is the case with cooperatives in general, the aim of cooperatives in this sector is not to maximize profits, but to be of use to their members and defend their interests. The goals of cooperatives include fostering sustainable development of local communities, promoting environmental concerns and ensuring the health and safety of consumers. With strength in numbers, cooperatives are able to further these aims through their ability to purchase and supply goods and services at competitive conditions in the interest of their members.

From this sector, there are **59** in the Top 300 based on turnover and **57** in the Top 300 turnover over GDP per capita

Insurance

This section focuses on mutual organisations and cooperatives owned and democratically controlled by their insured customers. Insurance co-operatives and mutuals focus on the long-term needs of their customers and on delivering high quality products at fair prices. According to the International Cooperative and Mutual Insurance Federation (ICMIF), mutual or cooperative insurers serve more than 900 million people worldwide. Their contribution is crucial within the social protection system, enabling members to obtain insurance policies at more favorable conditions than those available on the open market.

From this sector, there are **101** in the Top 300 based on turnover and **85** in the Top 300 turnover over GDP per capita

Financial service

This section refers to cooperative banks and credit unions providing banking and financial intermediation services, democratically controlled by member customers (borrowers and depositors). In the financial service sector, cooperatives play a central role in supporting economic development. Even during economic crises, cooperatives have remained more stable than other banks, continuing to provide trustworthy financial support for their members.

Education, health and social work

This section includes cooperatives that manage educational, health or social services. These may include consumer (user), producer (provider) and multistakeholder social and health cooperatives that seek to provide high-quality, cost-effective community health care and social services. The contributions of health and social care cooperatives range from medical intervention to the prevention of disease and the improvement of general health outcomes and collective well-being. The impact of these organisations is all the more important given the increasing demands on welfare systems around the world due in part to cuts in public funding and an aging population.

From this sector, there are **3** in the Top 300 based on turnover and **9** in the Top 300 turnover over GDP per capita

Large cooperatives: Digitalization, participation, and democracy

In the rapid transformation of the economy, digitalization* is assuming a key strategic function in enterprises. It is pervasive in all areas of activity in large, small, and micro enterprises and affects the entire value chain cycle of products and services.

Although the governments in many countries had already been promoting policies and actions to support digital transformation before the Covid-19 pandemic, the resulting restrictions on mobility highlighted even more how digital technologies now touch all aspects of our lives, including education, work, shopping, and healthcare (OECD, 2020). As we have seen over the past two years, increasing digitalization has not only brought about changes in people's work habits and purchasing behaviors but has also triggered deeper changes related to the way people relate to each other and participate in social and community life. Indeed, the digital transformation can accompany and accelerate sustainable growth by providing new channels and opportunities to share information and engage people in the democratic process. This also applies to cooperatives, which have as a cornerstone the active and democratic participation of members in their decision-making process.

However, although digitalization offers a multitude of possibilities, it is not without risks. On the one hand, digital technologies can improve people's standard of living and well-being and offer companies new opportunities and ways of doing business. On the other hand, their rapid expansion is leading, in several business sectors, to a concentration of the market in the hands of a few companies. The digital transformations occurring in the world of work also mean more opportunities for highly skilled workers who can meet the new skill requirements and a greater risk of automation for more routine jobs (UNDESA, 2020). This might lead to a reduction of the chances of decent work in certain activity sectors, with some sectors that are less likely to be affected by automation but are more prone to informal and non-standard forms of employment (ILO, 2017). Moreover, one cannot overlook the possible limits of digitalization in terms of democratic participation considering its risks in relation to security, privacy, and the digital divide.

* The term "digitalization" refers to the use of digital tools and technology by the organization and the term "digitization" to the transformation from physical to digital.

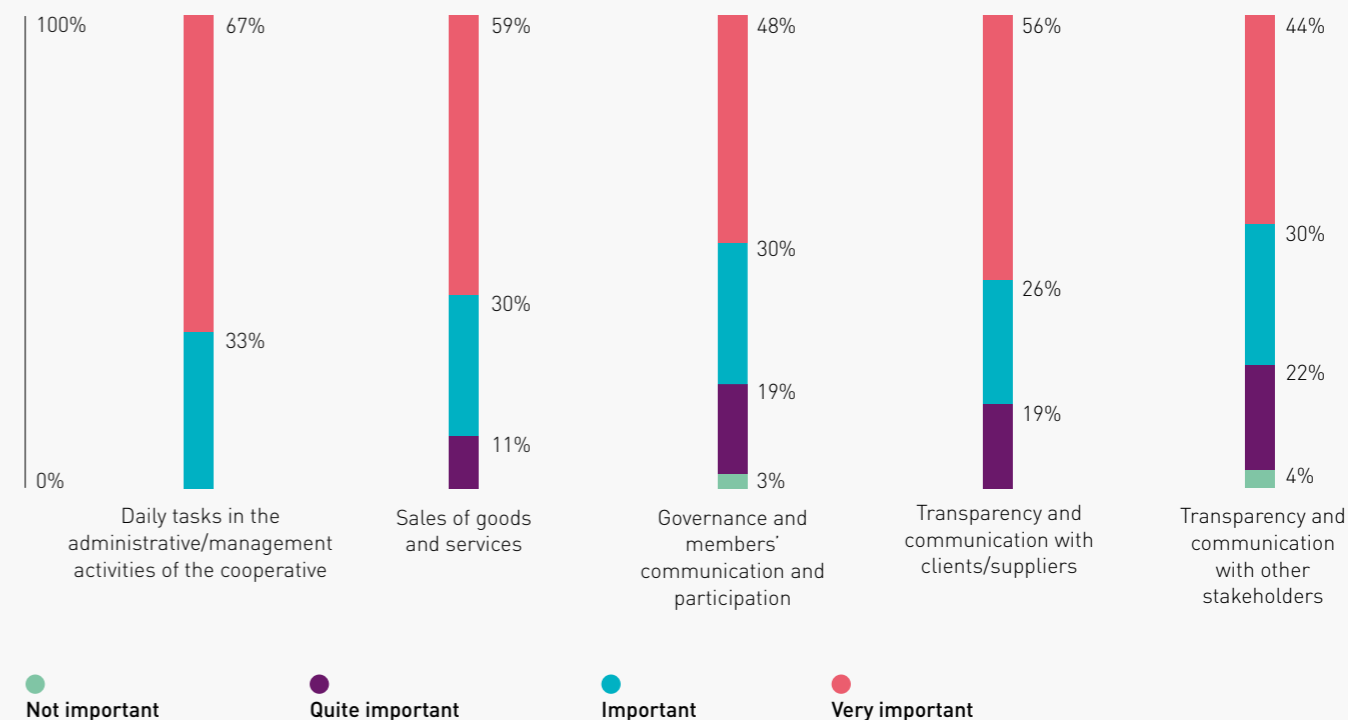

In this era of change, cooperatives can play an important role in ensuring labor inclusion and democratic ways of running businesses. Cooperatives are not only faced with the opportunities and challenges posed by the digitization of processes for managing work routines or those related to selling services and/or products to their customers. They are also concerned with how digital tools can support (or hinder) the connections between people and the democratic participation within organizations considering the limitations and risks of using said tools in terms of security, privacy, and the digital divide.

Looking at what is happening among cooperatives and what changes have been brought about by digitalization can be a good starting point for thinking about whether and how cooperatives can take advantage of the positive effects of digitalization and mitigate the negative ones. For this reason, an exploratory survey was conducted, with the support of the ICA's International Cooperative Entrepreneurship Think Tank with a small sample of large cooperatives with the aim of gathering information on the level of digitalization and practices of using digital tools for members' participation. 27 cooperatives took part in the survey. These cooperatives are in different areas of the world (11 in the Americas, 9 in Europe, 4 in Asia-Pacific, and 3 in Africa) and in different business sectors. Although the sample is not representative of the cooperatives listed in the World Cooperative Monitor top 300 ranking, it nonetheless was possible to collect the practices and experiences carried out by these cooperatives, which provide interesting insights into the relationship between digitalization and democratic participation.

LEVEL OF DIGITALIZATION

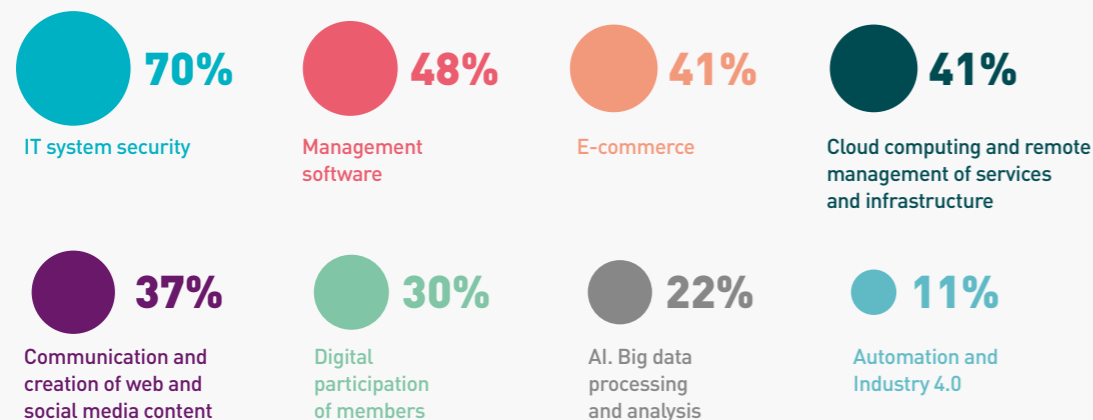

The members of the cooperatives interviewed are aware of the importance of digital tools that cut across different functions of corporate life. It is not simply a matter of using digital tools to handle the usual administrative operations; there is also an awareness that something fundamental has changed in the way cooperatives are managed. For more than eight out of ten cooperatives, it is important, if not essential, to use digital tools to sell their goods and services online and manage relationships with customers and suppliers. Slightly lower—with one-quarter of the respondents considering them only “quite important”—is the perceived importance of using tools to enhance member participation and communication with the stakeholders.

FIGURE 1. THE COOPERATIVES' RATINGS OF THE IMPORTANCE OF DIGITALIZATION IN DIFFERENT AREAS

It is therefore not surprising that according to the cooperatives interviewed, the business areas in which digital tools play a crucial role are IT systems and their security, business management software, and selling goods and services online.

TABLE 1. THE MOST IMPORTANT AREAS FOR COOPERATIVES REGARDING THE USE OF DIGITAL TOOLS

REMOVING BARRIERS to DIGITALIZATION

THE BRAZILIAN CASE

Digitalization is one of the hot topics for Brazilian cooperatives. As evidenced by the survey of a sample of 78 Brazilian cooperatives (conducted by OCB using the survey developed for this chapter), the pandemic has accelerated the use of digital tools in all major areas of business, from administration to online sales of goods and services, to member relationship management, especially in terms of participation in decision-making and member interaction.

It is especially the fronts of member participation in decision-making and communication with other stakeholders on which the cooperatives surveyed feel they still have work to do in terms of digitalization: almost one in four cooperatives feel they are less digitalized than they should be in these two aspects, while less than one in three have not yet achieved good levels of digitalization; however, on this front, one in two cooperatives feel they have now achieved good levels of digitalization.

The Organization of Brazilian Cooperatives (OCB) is one of the leading entities in the country to work on the topic of platform cooperativism, both by conducting and offering courses and training on the topic and by creating platforms for cooperatives to connect in the corporate environment. Fostering communication between cooperatives and collaboration among cooperatives are the goals of several projects promoted by OCB, with the recognition that intercooperation is synonymous with prosperity and longevity for cooperatives.

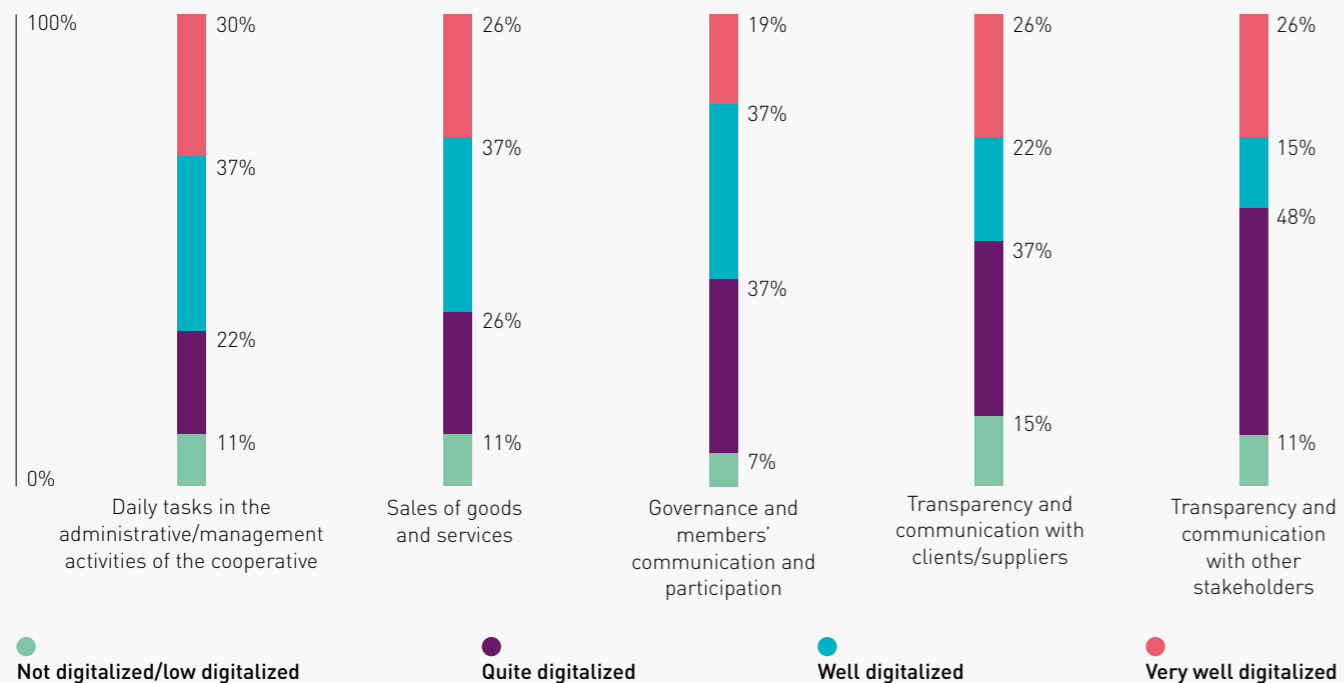

Such is the case with Negócios Coop, a platform developed by OCB to meet the demand that exploded with the 2020 pandemic. Now, the digital platform for business among Brazilian co-ops is on its way to consolidation as a large e-commerce cooperative, occupying an important space in the market.

This initiative proposes to make this e-commerce tool a showcase in which cooperative products and services can be displayed and found, creating a virtuous circle of commercialization. In addition, the Coop Business Platform is intended to remove the barriers that prevent many cooperatives from doing business with each other. To participate in this initiative, cooperatives must be registered with the OCB System. Currently, there are more than 500 announcements in the platform and more than 600 cooperatives indexed.

The theme of collaboration is also at the heart of the *Colaborativa* platform, a communication and information management platform that enables, in a secure and unified way, access to documents, information, and services from the OCB headquarters (national unit) to state units (regional offices), promoting agility, transparency, security, and productivity. Within the platform, the user can consult and download official documents, such as regulations, manuals, visual identities of campaigns, models of technical notes, and other materials, for continuous consultation.

What is interesting to analyze is that, among the large cooperatives surveyed, there is ample room for improvement in the level of digitalization in all the dimensions surveyed. About one in ten cooperatives consider themselves to be poorly digitalized. Although with different percentages for individual business areas, there is room for improvement both in terms of the day-to-day management of activities and the online sale of goods and services, but more especially in terms of member participation and communication with stakeholders.

FIGURE 2. THE COOPERATIVES' RATINGS OF THE LEVEL OF DIGITALIZATION COMPARED TO WHAT THE COOPERATIVE WOULD LIKE TO HAVE IN DIFFERENT AREAS

The gap between perceived importance and the level of actual digitalization might be related to the fact that the systemic use of digital tools in certain business areas only came into full swing during the Covid-19 pandemic. Indeed, although most of the cooperatives surveyed were already using digital tools—to varying degrees in different business areas, especially in the day-to-day management of activities—the pandemic increased their use and forced those cooperatives that were not yet using such tools to innovate and introduce them into their strategic, management, and work routines.

TABLE 2. COOPERATIVES' OPINIONS ON HOW THE COVID-19 PANDEMIC CHANGED THE USE OF DIGITAL TOOLS FOR THE FOLLOWING ACTIVITIES

	WE DID NOT USE DIGITAL TOOLS BEFORE BUT NOW WE DO	WE USED DIGITAL TOOLS BEFORE, BUT WE HAVE INCREASED OUR USAGE
Daily tasks in the administrative/management activities of the cooperative?	4%	85%
Sales of goods and services?	19%	56%
Governance and members' communication and participation?	19%	70%
Transparency and communication with clients/suppliers?	4%	67%
Transparency and communication with other stakeholders?	15%	52%

SUPPORTING COOPERATIVES in the DIGITAL ERA

THE ITALIAN CASE

The digital transition is a key issue for Italian cooperatives, as shown by the results of two surveys conducted by the study centers of the two main Italian federations to monitor the ongoing transformation process and track the results of the actions that will be introduced by the federations to support businesses in this transition phase.

The survey conducted by the Legacoop Study Center showed that some digital tools have now entered the ordinary work of member cooperatives: 98% have an Internet connection, 78% have a website, and more than 90% have had online dealings with public agencies. More advanced digital tools are also beginning to find their way into cooperatives: 21% use Internet

of Things (IoT) devices; 10% use AI devices to convert voice notes to digital text or generate written or spoken language. The pandemic has accelerated the innovation process within organizations: data show that 41% have increased the percentage of employees with remote access; 76% have increased the use of remote meetings; and 22% have initiated or increased online sales efforts. For nine out of ten cooperatives, these increases were dictated by the pandemic (Area Studi Legacoop, 2022).

The survey conducted by the Confcooperative Study Center also confirms the high share of cooperatives that made investments in new technologies during 2021. Among these, 6% invested in big data analytics, and 2% invested in Internet of Things devices, robotics, augmented reality, and virtual reality. Digital tools are taking on an increasingly strategic role in driving innovation, with an impact on the internal organizational models of cooperatives as well (Fondo Sviluppo, 2022).

These data highlight how a significant change is taking place that is, first and foremost, cultural, and that federations are trying to support this transformation through some ad hoc projects and initiatives with a long-term scope. For example, the “Digital Cooperation” project is promoted by the Italian Alliance of Cooperatives with the support of Google.org, the philanthropic division of Google committed to addressing the main challenges of our society through funding, technological innovation, and technical expertise to support the most vulnerable communities and provide greater equity and inclusion.

The project stemmed from a discussion with the Italian Ministry of Economic Development on the topic of the digital transformation of Italian businesses, with the aim of enhancing cooperative and nonprofit enterprises by enabling 500 of them to seize the opportunities of digital transformation—including those businesses that would not be able to do so on their own—and, at the same time, strengthen the ecosystem of high-tech cooperative and nonprofit entrepreneurship. Thus, the project aims to create employment opportunities particularly for those most in need, as well as to empower the most vulnerable cooperatives, cooperators, and enterprises to seize the opportunities offered by the Italian recovery plan.

PARTICIPATION IN THE DIGITAL AGE

Cooperatives use digital tools to communicate systematically and assiduously with their members—often on a daily and weekly basis—from the most classic tools, such as the website and the online newsletter, to those tools that were rapidly deployed during the pandemic to facilitate working relationships when it was impossible to meet physically.

While communications are routinely handled with digital tools, their use on the member engagement front shows both the potentials and limitations of these tools supporting member participation in the life of the cooperative. In fact, while cooperatives seize as a positive factor the possibility of more easily organizing events (decision-making, training, or just debate and discussion) in which many members can participate regardless of their geographical location (e.g., in the streaming of the event), the experiences collected highlight that there are also barriers to both access and communication.

Driven by the challenges of the pandemic, all the surveyed cooperatives have activated online modes of participation in their general meetings. Until 2018, these meetings were run almost entirely in person, although a few cooperatives had already provided online voting tools. It was only with the travel limitations triggered by the virus containment provisions adopted in several countries that cooperatives opted to hold online meetings, which moved to the hybrid mode in 2021 and gradually have returned to in-person meetings in 2022. This is because, although digital tools have ample potential in engaging members unable to attend the meetings in person, they have also shown limitations in engaging certain categories of members unfamiliar with the use of technologies (and here the problem of the digital divide is confirmed). In addition, cooperatives complain about the lack of less formal interaction in online meetings (even arising spontaneously alongside the official meetings), as well as the difficulty of interpreting nonverbal communication, which makes it necessary to devise different communication methods than in the past.

However, the use of digital tools is not limited only to the involvement of members at the general assembly. Over half of the cooperatives surveyed also see the potential of digital tools to involve members in the co-creation of services and goods and to

promote interaction among members. On this front, digital tools aid cooperatives by making it possible to run periodic surveys to gather suggestions and opinions both on new (potential) products and services and on other issues. They also facilitate the organization of focus groups and test groups in which members can discuss and share opinions on a wide range of topics.

IS THE FUTURE IN DIGITAL PARTICIPATION?

From the experiences gathered through the explorative survey, it does not seem that digitalization can radically reshape the way cooperatives relate to their members. The practices collected so far highlight how digital tools can facilitate the involvement of cooperative members in some situations, but in many of the cases examined, they are placed side by side with traditional methods to ensure the full participation of all members in the life of the cooperative. And this turned out to be the secret of cooperatives: embracing virtual participation while not neglecting in-person engagement.

This is not to say that digitalization is not a crucial challenge for cooperatives. Cooperatives grasp the benefits that digitalization can bring in terms of democratic participation, but they perceive as more imminent and disruptive the challenges arising from rapid change of technology, industries, and processes due to increasing interconnectivity and smart automation and the consequences this may have on the world of work. And it is on these two dimensions that the large cooperatives focus their attention, even with the ever-present goal in mind of ensuring sustainable growth and decent work for all.

INTERCOOPERATION for a DIGITAL FUTURE.

THE VIEWPOINT OF IT COOPERATIVES

At the same time as the processes of digitisation of co-operative organisations are being generated, we must be particularly careful about the tools we choose to use. The digital media that facilitate the flow of information are not disconnected from the business logic present in society, and in this sense the question arises as to how to encourage the use and development of technology that contains co-operative values from the outset.

Free Software is therefore presented as a development tool and model, since in addition to containing its four fundamental freedoms (according to GNU.org - use it for any purpose, study how it is made, modify it and distribute it with its modifications), it also encourages collaborative development practices focused on the production of common resources. This possibility that both technicians and users can participate in the development process of a tool enables the participation of different views, needs and subjectivities, in order to generate an inclusive software that is attentive to the diversities that make up our different organisations.

On the other hand, this development model does not generate costs in licenses, saves resources by being able to reuse code bases for new developments (not reinventing the wheel each time) and promotes local economic and knowledge development by allowing development teams to reuse, modify or expand these tools.

In Argentina, FACTTIC (Federation of Technology Cooperatives) and the cooperatives that make up PATIO (the global network of technology cooperatives) are working on the development of tools that take into account the cooperative value system and that can be adapted to the needs of the different organisations in the sector. This was set up following the case of FIT (Flujo Intercooperativo de Trabajo), a FACTTIC space where IT solutions are generated in an intercooperative manner, with the premise of cooperation rather than competition between companies in the same sector.

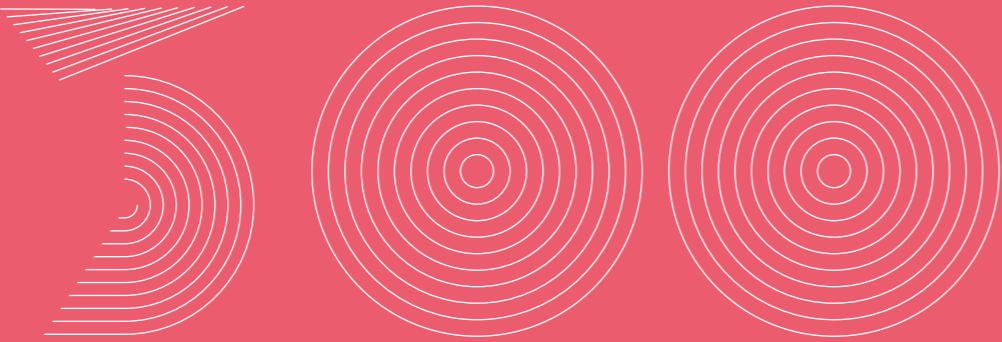

With common needs, large cooperatives can think of intercooperation as the answer to develop technology that fits their needs and values. Sharing governance and the software itself strengthens the whole movement and makes resources available to developing co-operatives.

FACTTIC is the Argentine Federation of Technology, Innovation and Knowledge Worker Cooperatives. It brings together more than 35 cooperatives throughout Argentina and is an active facilitator of the ICA IT network. <https://facttic.org.ar>

ICA IT network was originally created as a space for members to find IT cooperatives for technical help and advice. It has grown to become a platform where different actors can connect with each other and the ICA looks forward to creating even more channels to foster intercooperation on a platform called "Patio" in the future.

Methodology and Data Sources

The methodology for the World Cooperative Monitor is briefly described below.

A summary of the population under study, data collection, rankings, and methodological issues is provided⁴.

The World Cooperative Monitor project intends to pursue three goals:

1. provide visibility to the movement by monitoring and demonstrating the impact of large cooperatives, from both an economic and a social perspective;
2. maintain an up-to-date database on large cooperatives containing economic and employee data;
3. respond to the knowledge needs of large cooperatives, providing both ad-hoc quantitative and qualitative research on aspects of their interest.

WHO IS SURVEYED

The project collects data on large cooperative enterprises and aggregations of cooperatives, mutual, and non-cooperative enterprises in which cooperatives have a controlling interest.

The project focuses on units that carry out economic activity for the production of goods or services for their members. Cooperative unions and federations that mainly carry out lobbying, representation, and protection of the interests of associated cooperatives are not covered by the project.

The organisation types to be surveyed are currently under revision by the World Cooperative Monitor team and Advisory Committee to better compare organisations across countries, sectors, and types. The difficulty lies in the fact that finding a definition that is shared by different countries is complicated. There are very different regulations and laws between one country and another in this regard and finding a way to define all organisations through a unique classification, which can at the same time take into account and enhance the peculiarities of the different systems is compli-

⁴ The full methodology is available at www.monitor.coop

cated and challenging. Moreover, cooperatives that enter the top 300 classification of the WCM, given their size, are real giants from an economic point of view and therefore their structure is in most cases very complex and branched. On this point a continuous exercise of refinement over the years, is leading to a continuous improvement of the data collected.

Classifications

The project classifies the cooperative organisations by economic activity and cooperative type (International Labour Organisation, 2018). Information on the economic activity or industrial sector of each organisation is collected and classified into ten categories (see full methodology), each of which mainly reflects the structure of ICA sectoral organisations. The classification into the ten categories is determined by the International Standard Industrial Classification of All Economic Activities (ISIC) or regional and national equivalents class, in which the activity of the cooperative is included. If a cooperative combines two or more economic activities, the main economic activity is identified following international methods and standards.⁵

In the sector rankings, some economic activities are combined to form more general sectors, as described in the rankings paragraph. Units are also classified based on the main interest of their members (Table 1). In the cases of cooperatives with members' interest different from those proposed in Table 1, they will be analysed case by case. Mutuels and non-cooperative enterprises are classified as such.

⁵ "The principal activity of the unit in general can usually be determined from the goods that it sells or ships or the services that it renders to other units or consumers. [...] Ideally, the principal activity of the unit should be determined with reference to the value added to the goods and services produced. The relevant valuation concept is gross value added at basic prices, defined as the difference between output at basic prices and intermediate consumption at purchaser's prices." (UN 2008, p. 20).

Indicators

The project collects primarily economic data, along with data, where possible, on work generated, calculated using the total head count at the balance sheet year-end date, but also taking into account the data of Full-time equivalents or average data of the employed for the year in case data on head count are not available.

Annual turnover data is collected for the all the entities. In the case of a cooperative group, the consolidated data is taken into account. If the consolidated data is not available, if possible the turnover of the entities that make up the group are considered, excluding the amount of value resulting from operations within the group, meaning operations among members of the group.

TABLE 1. COOPERATIVE TYPE CLASSIFICATION

Producer cooperatives	The main interest of the members is related to their production activity as enterprises in their own right. The members typically comprise household market enterprises such as small agricultural or craft producers but may also include corporations.
Worker cooperatives	Members share an interest in the work which is provided by or ensured through the cooperative. The members are individual workers (worker-members) whose jobs are directly assured through their cooperative.
Consumer/User coops	Members are the consumers or users of the goods or services made available by or through the cooperative. Financial service cooperatives are classified as part of consumer/user cooperatives even if these cooperatives also service producers.
Multi-stakeholder coops	A cooperative which has more than one type of member with significant involvement in the activity of the cooperative and in which: (i) more than one type of member is represented in the governance structure of the cooperative; and (ii) no type of member has a dominant position through a majority of votes in the governing body or an exclusive veto over decisions.

Source: (International Labour Organisation, 2018)

The present report refers to data from the fiscal year 2020. For all the economic and occupational data, the account closing date is 31 March, which means that data for accounts with closing dates between 01/04/2020 and 31/03/2021 is considered as representing economic activity in year 2020.

Economic data is collected in the local currency and then converted into USD. The average monthly 2020 exchange rate was utilized. Note that the conversion to USD from Local currency unit (LCU) is impacted by the fluctuations from year to year. Economic data is reported in billion (1 billion = 1,000,000,000). The absolute values are rounded to the second decimal place and percentages are rounded to the nearest whole number.

Rankings

In the rankings tables, in addition to the Top 300 rankings, a list of the largest cooperatives in each individual sector is presented. The rankings presented are based on turnover data, defined as the income generated by the business activities conducted by a company, usually the sales of goods and services to customers. In the case of the Insurance sector, this is premium income. For the Financial Service sector, this is the sum of net interest income, net premiums and other operating income, such as deposit and payment service charges, lending fees and credit card service revenues, income from brokerage and investment fund services, management and custodial service fees, foreign exchange income as well as other income. However, this value was used solely for the Financial Service ranking. In the Top 300 ranking, to achieve a more homogeneous comparison, the sum of interest income, non-interest income (income from banking services and sources other than interest-bearing assets) and premium income (if the organisation also provides insurance services) was utilized for financial service organisations. This methodology creates the most homogeneity possible among data sources but note that there could be variations among countries and existing rankings regarding calculations and values used. When available, the number of employees is also listed.

In addition to rankings based on turnover, a Top 300 ranking based on the ratio of turnover over gross domestic product (GDP) per capita is also presented. The purpose of this

FIGURE 1. ECONOMIC DATA SOURCES
2022 WORLD COOPERATIVE MONITOR
DATABASE

ranking is to neutralize the differences between the different countries due to differences in purchasing power and therefore the different cost of living that differentiates the individual countries: this allows a greater comparison of turnover.

Some of the economic activities described above are grouped into sectors for the sector rankings: fishing is included in the agriculture and food industries sector, industry and utilities are grouped together, as are housing and other services.

Data sources

Data is collected through online research and consultation of financial statements and annual reports integrated with datasets developed at the national/regional level by representative associations of cooperatives and mutual societies and other private databases that gather personal and economic data about cooperative organisations from across the world. A questionnaire directed at the largest cooperatives was also utilized.

Also, with regard to the employment data, the working group has used various sources, online research, the questionnaire completed by the organisation, data collected from lists at the national level and data collected in databases.

The direct involvement of federations and cooperatives is essential to ensuring good coverage in different areas of the world. For this reason, ICA promotes the creation of national monitors which, following the methodology of the international project, collect data on the largest cooperatives active in the country.

PROMOTERS

International Cooperative Alliance (ICA)

www.ica.coop

The International Cooperative Alliance is an independent, non-governmental association which unites, represents and serves cooperatives worldwide. Founded in 1895, the ICA has member organisations in 100 countries active in all sectors of the economy. Together these cooperatives represent nearly one billion individuals worldwide.

European Research Institute on Cooperative and Social Enterprise (Euricse)

www.euricse.eu

The mission of the European Research Institute on Cooperative and Social Enterprises is to promote knowledge development and innovation for the field of cooperatives, social enterprises and other non-profit organisations engaged in the production of goods and services. The Institute aims to deepen the understanding of these types of organisations and their impact on economic and social development, furthering their growth and assisting them to work more effectively. Through activities directed toward and in partnership with both the scholarly community and practitioners, including primarily theoretical and applied research and training, we address issues of national and international interest to this sector, favouring openness and collaboration.

ORGANISATIONAL PARTNERS

Made possible by the support of our organisational partners

SPECIAL CONTRIBUTION FROM

National Agricultural Cooperative Federation (NACF)

NACF was borne out of the integration of the former agricultural cooperatives and the Agricultural Bank in 1961. Since then, NACF has played a crucial role not only in improving the conditions of farmers economically, socially and culturally, but also in contributing to the balanced development of the Korean economy. NACF and its member cooperatives are engaged in diversified business activities and support services to meet the need of member farmers and other clients. They can be grouped into three broad categories: banking sector, non-banking sector (commercial business), and support service sector. They also handle the farm credit guarantee service for the government.

IFFCO Ltd

In 1967, the Indian Farmers Fertiliser Co-operative Limited (IFFCO) was established by an initiative of NCBA/CLUSA in collaboration with ACDI/VOCA for the welfare of India's farmers. Today, IFFCO is the world's Largest Fertiliser Cooperative, growing from an association of just 57 cooperatives in 1967, to 35,300 cooperatives at present. IFFCO is an autonomous cooperative i.e. wholly owned by Cooperative Members. All its initiatives are aimed to benefit its member's i.e. farmers.

Banco Credicoop

It was established in 1979. Today, it is the Argentina's eleventh-largest bank by total assets and ninth largest by deposits (US\$2.8 billion); nearly all of this is accounted for by its over 670,000 members, and Credicoop maintains 244 branches. It is also a lender in a country where domestic credit is difficult to access, holding a net loan portfolio of US\$1.7 billion (3.5% of the domestic total).

Wholly owned by Cooperatives

CCA Global Partners

Founded in 1984, CCA Global is an international purchasing cooperative supporting over 500,000 family businesses and over 20,000 childcare centers in four countries and another 1 million independent businesses in North America benefit from CCA Global's business leadership through its 14 different affiliate companies. These businesses represent five distinct categories: flooring and home furnishings; business services; sporting goods; nonprofit and childcare; and management and contracting. Today, CCA is one of the largest privately held cooperatives in the United States. The superior benefits that CCA Global delivers include: Lower buying & operating costs; Powerful & fully supported tech solutions; Expert marketing programs; National advertising & PR support; Exclusive profitability tools; and Award-winning training programs.

Cooperativa Obrera

Founded in Bahía Blanca in the year 1920 when a group of 173 residents of Bahía Blanca decided to join to form a cooperative bakery that would ensure the right price, the exact weight and quality of bread, such a vital food. In 1932 its first cooperative store was opened. Today it has 1.6 million associates and 5,000 workers. It is the second large consumer cooperative in Latin America. It has its own quality control laboratory. It also has own credit cards which facilitates access to credit to its members.

Kibbutz Movement

The Kibbutz (Hebrew word for "gathering") Movement is the largest settlement movement in Israel. It was re-organized in 1999 as a merger between two Kibbutz organizations and includes 257 members (kibbutzim). The kibbutz is a multi-purpose cooperative, binding together community, housing, and production means. The majority of kibbutzim are rural communities, based on principles of joint ownership, equality and cooperation in production, consumption and education, providing mutual aid to their members.

Midcounties Cooperative

The Midcounties Co-operative is the largest independent consumer cooperative in the UK, with over 700,000 members. It operates a range of businesses in Food, Travel, Healthcare, Funeral, Childcare, Energy, Post Offices, Flexible Benefits and Telecoms. It was formed in 2005, by the merger of the Oxford, Swindon and Gloucester Co-operative Society and the West Midlands Co-operative Society. The Midcounties Co-operative generates annual gross sales of over £1bn, has over 400 Trading Sites, 8,000 colleagues and over 700,000 members. It focuses on enabling their members to influence, connect and co-operate in joint activities that benefit their Society, their members and their communities.

Mondragon Corporation

MONDRAGON groups 98 cooperatives located mainly in the Basque Autonomous Region of Spain, and in their majority SMEs. It is the largest business group in the Basque Autonomous Region and the tenth in Spain. Its origins go back to 1956, when the first industrial worker cooperative was established in Mondragon, then a very small Basque town. It is a cross-sectoral group organized into four major areas: industry, distribution, finance and knowledge. Its mission combines the basic objectives of a business organization competing in international markets with the use of democratic and participatory governance, job creation, human and professional promotion of its workers and commitment to social and economic development of its territory.

National Co-op Grocers (NCG)

NCG is a business services cooperative for retail food co-ops located throughout the United States. We represent 147 food co-ops operating over 200 stores in 39 states with combined annual sales over \$2.1 billion and over 1.3 million consumer-owners. NCG helps unify natural food co-ops in order to optimize operational and marketing resources, strengthen purchasing power, and ultimately offer more value to natural food co-op owners and shoppers everywhere.

Rabobank

The first local Rabobank was established in 1895. Nowadays, Rabobank Group consists of 89 local Rabobanks, Rabobank Nederland (APEX) and domestic and foreign subsidiaries. Rabobank has 1.9 million members who are customers of local Rabobanks. The common thread since Rabobank's inception is to offer financial solutions for economic needs and social issues. In practice, Rabobank has frequently reoriented its strategy, business model and governance structure in anticipation of or in response to shifting trends in society, technology, competition, banking regulation and supervision, etcetera. Being a cooperative, profit maximalisation has never been our overriding purpose, but profits are necessary for meeting capital requirements, continuity and the pursuit of our social goals.

S-Group

S Group is a Finnish network of consumer cooperatives operating in the retail and service sectors, mainly in Finland but also in Estonia and in Russia. S Group comprises 19 regional cooperatives and SOK Corporation along with its subsidiaries. SOK Corporation was founded in 1904 and it's owned by the regional cooperatives. Today by turnover, S Group is the biggest cooperative group in Finland. S Group's key business areas are the supermarket trade, department stores, specialty stores, the hardware trade, service station store and fuel sales, and the travel industry and hospitality business. In addition, S-Bank offers banking services to cooperative members. Individual cooperatives conduct also automotive trade and services.

Sancor Seguros

The Sancor Seguros Group is a financial cooperative institution based in Sunchales, province of Santa Fe, Argentina. It was founded in 1945. The cooperative manages different specialized organizations, including: Sancor Seguros (insurer) Prevención ART Prevención Salud, Prevención Retiro, Alianza Inversora, CITES, Fundación Grupo Sancor Seguros and Banco del Sol. As of March 2020, it has a capital of 363 million dollars. It has more than 7 million capita insurance and 170 thousand health affiliates. It has about 8,300 associated producers and 3,330 employees. It opened subsidiaries in Uruguay in 2006, Paraguay in 2009 and Brazil in 2013.

Smart

Established in 1998 as non-profit association specialised in offering economic activity and contract management services, insurance services, legal and consulting services, information and training, co-workspaces, and mutual financial tools mainly to artists, Smart Belgium was converted into a cooperative in 2016 and has a French and Belgian management. More recently it has opened itself to freelancers of all sectors of activities. Smart Belgium has organised a process for converting itself into a multi-stakeholder cooperative (workers, clients, partners, service providers etc.). Smart has disseminated to another 8 European countries through similar cooperatives, with a total of 85,000 members.

UP Group

Founded in 1964 as a consumer cooperative, it became a worker cooperative in 1972. It designs and markets products and services that facilitate access to food, culture, recreation, education, home help, and social assistance but also accompanies companies in the management of their professional expenses or in the animation of stimulation and fidelity devices. It offers a wide range of titles and services for companies, works councils, communities and individuals. The group is also present in the software solutions market for personal services structures. Present in 19 countries on all continents, the Up group works for more than 24.5 million customers and is the world number three in lunch vouchers.

Vancity

Founded in 1946, Vancity is a values-based financial cooperative serving the needs of its more than 543,000 member-owners and their communities in the Coast Salish and Kwakwaka'wakw territories, with 55 branches in Metro Vancouver, the Fraser Valley, Victoria, Squamish, and Alert Bay. With \$23.2 billion in assets plus assets under administration (\$28.2 billion total) and 2,675 employees, Vancity is Canada's largest community credit union. Vancity uses its assets to help improve the financial well-being of its members while at the same time helping to develop healthy communities that are socially, economically, and environmentally sustainable. Vancity shared 30% of its net profits with members and communities, sharing over \$375 million through Shared Success since 1994.
